L1 ANSWER 13 OF 129 MEDLINE on STN
AB . . . (LTC) still needs to be performed through highly accurate and reproducible approaches. In this study, we used a validated real-time ***polymerase*** chain reaction (***PCR***) strategy to evaluate LTC of BM and PBPC samples obtained from MM patients. MATERIALS AND METHODS: The patients underwent two different mobilization courses (defined as early or late course) following two ***cycles*** of cyclophosphamide 5 g/m². LTC was evaluated by measuring the number of clonal immunoglobulin heavy-chain rearrangements followed by normalization of. . . PBPC and 12 BM samples were analyzed. Main results are as follows. 1) PBPC harvests are less contaminated than BM ***samples***
taken immediately after ***each*** mobilization course (median difference 2.68 logs; range 1.7 to 4.6) (p < 0.0001). 2) LTC of PBPC harvests has only. . . a clear overestimation of the percentage of plasma cells when flow cytometric evaluation of CD38(bright) cells is compared to real-time ***PCR*** results. This suggests that in PBPC, most CD38(bright) cells do not belong to the neoplastic clone.
CONCLUSIONS: Real-time ***PCR*** using the IgH rearrangement proved an effective tool for monitoring LTC in stem cell harvests from MM patients. The smaller. . .

AB The dopamine agonist bromocryptine, probably through ***amplifying*** gonadotroph (mainly FSH) secretion, was found to be suitable for provoking fertile estrus during the anestrus phase in bitches without functional ***cycles*** and/or ovarian activity. We studied estrus induction in 48 bitches after treatment with semisynthetic ergot alkaloid bromocryptine. For habituation a. . . estrus, ovulation and pregnancy were monitored by cytological evaluation of vaginal epithelium, rapid ELISA for plasma progesterone and ultrasonography, respectively. ***Samples*** for progesterone were ***taken*** on Days 7, 9, 12 and 15 and sonograms of ovarian follicles and of fetuses were taken on Days 0, 22 and 35. The bitches involved in the study either regular or irregular ***cycles***. Bromocryptine treatment induced estrus in ***all*** of the bitches including 40 of 48 (83%) with ovulation within a regular estrus and 6 of 48 (12.5%) that. . .

AB . . . the presence of asymptomatic iridovirus infection in various cultured marine fishes in Asian countries. The presence of iridovirus in 250 ***samples*** ***taken*** from fish of market size of 4 different farmed species for ***each*** month of 2003 was detd. using a 2- ***step*** ***PCR*** technique. The proportion of iridovirus-pos. fish varied from month to month, but the overall prevalence was 37.2% (93 / 250),. . .

L1 ANSWER 38 OF 129 CAPLUS COPYRIGHT 2006 ACS on STN
AB The invention provides methods for multiplexing readouts from multiple hybridization-based assays that ***each*** comprise one or more hybridization or annealing ***steps*** and one or more enzymic processing ***steps***. In one aspect, the invention permits simultaneously anal. of a plurality of genomes by sep. hybridizing a set of probes. . . different genomes to form sets of probe-genome complexes in sep. reaction mixts. that are combined and enzymically treated to form ***amplifiable*** probes. From such ***amplifiable*** probes, labeled probes are produced so that for ***each*** different locus of ***each*** different genome there is a unique labeled probe, which are then specifically hybridized to their resp. complements on a microarray. In another aspect, labeled oligonucleotide tags are produced from ***amplifiable*** probes. The invention is useful in applications of multiplexed hybridization-based assays for measuring characteristics of genomic ***samples*** ***taken*** from many different individuals. By conducting hybridization ***steps*** sep. on samples different individuals then combining them for enzymic processing, one takes advantage of natural reaction rate differences between. . .

L1 ANSWER 45 OF 129 CAPLUS COPYRIGHT 2006 ACS on STN
AB Studies examg. gene expression with RT- ***PCR*** typically normalize their mRNA data to a constitutively expressed housekeeping gene. The validity of a particular housekeeping gene must be detd. for ***each*** exptl. intervention. The authors examd. the expression of various housekeeping genes following an acute bout of endurance (END) or resistance (RES) exercise. Twenty-four healthy subjects performed either a interval-type ***cycle*** ergometry workout to exhaustion (.apprx.75 min; END) or 300 single-leg eccentric contractions (RES). Muscle biopsies were taken before exercise and 3 h and 48 h following exercise. Real-time RT- ***PCR*** was performed on .beta.-actin, cyclophilin (CYC), glyceraldehyde-3-phosphate dehydrogenase (GAPDH), and .beta.2-microglobulin (.beta.2M). In a second study, 10 healthy subjects performed 90 min of ***cycle*** ergometry at .apprx.65% of VO2max, and we examd. a fifth housekeeping gene, 28S rRNA, and reexamd. .beta.2M, from muscle biopsy ***samples*** ***taken*** immediately postexercise. We showed that CYC increased 48 h following both END and RES exercise (3- and 5-fold, resp.; P. . .

L1 ANSWER 50 OF 129 CAPLUS COPYRIGHT 2006 ACS on STN
AB The present invention relates to app. and methods for identifying genetic haplotypes by direct detection of nucleic acid fragments or mols. marked by interaction with at least one probe. In one aspect of the invention for haplotype detn. a first genetic variation (GV) site is detected by a specific oligonucleotide primer. Transcription is initiated from the primer using thermal DNA ***polymerase***, and extension products are generated. Thermal cycling is instituted for 30 ***cycles*** to generate multiple extension products from ***each*** template. A single fluorescent PNA probe (labeled with Alexa 680 dye) that hybridized

to a downstream GV on the extension product is added to the extension products under conditions that enable hybridization of the PNA to the extension product. After a 30 min incubation at room temp. unhybridized PNA is ***removed*** from the ***sample*** by centrifugation of the sample through a Microcon 30YM filter/concentrator. Samples are then analyzed using a single-mol. electrophoresis instrument. Excitation of the sample is accomplished using a solid state laser at 1.5 mW power output per laser beam and 635 nm excitation wavelength. Two laser beams and two detectors with filters appropriate to detect fluorescent emission from the Alexa 680 dye are used as described earlier to det. the electrophoretic velocity of mols. in the sample. Fluorescent mols. with a velocity other than that of free PNA are enumerated. Such mols. are indicative of extension product-PNA hybrids and serve to indicate the haplotype. Methods of the present invention can be used to det. haplotypes for multiple GVs in multiple genetic regions in a single assay. In addn., the present invention combine s the advantages of single-mol. detection of nucleotide markers with free-soln. or sieved, single-mol. capillary electrophoresis techniques. An exemplary app. is depicted for rapid haplotyping by labeled single mol. fluorescence detection.

L5 ANSWER 2 OF 3 MEDLINE on STN DUPLICATE 2
 TI Intra-graft cytokine mRNA levels in human liver allograft rejection analysed by reverse transcription and semiquantitative polymerase chain reaction amplification.

L5 ANSWER 3 OF 3 BIOSIS COPYRIGHT (c) 2006 The Thomson Corporation on STN
TI Semiquantitative analysis of IL-2 and IFN-gamma mRNA in vito in
experimental autoimmune uveoretinitis.

=> d kwic 1-3

L5 ANSWER 1 OF 3 MEDLINE on STN DUPLICATE 1
AB . . . non-competitive RT-PCR which used external standards to
quantitate TNF-alpha mRNA in liver biopsy specimens from liver transplant
patients. It involved ***removal*** of ***aliquots*** from the
PCR reaction at ***successive*** ***cycles*** , followed by
dot-blotting of the samples onto nylon membrane and hybridization with a
radioactively-labelled internal probe. Phosphorimage analysis of the. .
.

L5 ANSWER 2 OF 3 MEDLINE on STN DUPLICATE 2
AB . . . acute rejection and the slight decrease of IL-10 in chronic
rejection was confirmed by a second semiquantitative analysis which
involved ***removal*** of ***aliquots*** of ***PCR*** reaction
at ***successive*** ***cycles*** followed by dot-blotting and
hybridization.(ABSTRACT TRUNCATED AT 250 WORDS)

L5 ANSWER 3 OF 3 BIOSIS COPYRIGHT (c) 2006 The Thomson Corporation on STN
AB. . . cDNA were amplified by Taq polymerase using oligonucleotide primers
directed against portions of the IL-2, IFN-gamma, or G3PDH cDNA.
Identical ***PCR*** ***samples*** were ***removed***
every three ***cycles*** throughout the exponential
amplification phase. PCR samples were analyzed either by agarose
gel electrophoresis followed by Southern blotting, or by dot blotting and
then. . .
